

Section 1 - Eligibility

Eligibility confirmation

By checking this box, you are confirming that you have completed the [eligibility questionnaire](#) on our website and are confident that you are indeed eligible to apply. Please also ensure that you have read and understood the [Terms and Conditions of Funding](#) before you go on to complete the application form.

Unchecked

Section 2 - Strategic overview

Please tell us how this project contributes to the achievement of the Dunhill Medical Trust's strategic objectives

[You can find out more about these via the Trust's website.](#)

No Response

Please explain how this project will help to expand and/or sustain research capacity in the Trust's areas of focus

For example, developing the careers of those early in their career, encouraging established researchers in other disciplines to work in the area, encouraging those who wish to return to research. This might include formal training, mentorship, support to participate in networks etc.

If you are a first time PI we would wish to see that you have a suitably experienced and supportive team around you. Please provide examples of how they will support you.

No Response

Please tell us why the question this project is seeking to address is important

This should include a brief statement summarising the background and rationale and how it will inform future understanding of the mechanisms of ageing and/or practice in the care and support of older people and within what timescale. Please also detail how this project will build on the existing knowledge.

This is your opportunity to tell us why your project is novel. Tell us what is already known in the area of your proposal and what this project will add.

No Response

Section 3 - The research project

Title of proposed project

No Response

Indicative timescale for proposed project (in months)

No Response

Please provide an academic abstract (include here your aims and objectives and hypotheses, if appropriate)

No Response

Please provide the key references for your academic abstract (Reference format: Harvard)

No Response

Please provide a short description of your project, suitable for lay readers

This section is vital to demonstrate lay communication

No Response

Please provide an overview of the methods you are intending to use for your study (what you plan to do) and why you chose these methods.

Present all usual elements that are pertinent to your chosen methods, including your analytic strategy. Given the priorities of the Trust, make reference to the relevant gerontological science and practice.

Please also outline any risks and contingency plans.

If you are invited to submit a full application, there is a higher word limit for this question and you will be able to provide greater detail.

Please note that at the outline stage, figures and/or tables cannot be uploaded. However, if you are invited to submit a full application, they can be provided then.

No Response

Please describe how patients and the public have been involved in developing this proposal

If this is not appropriate for your research proposal, please tell us why.

No Response

Please describe the ways in which patients and the public will be actively involved in the proposed research, including any training and support provided

If this is not appropriate, please tell us why.

No Response

How will your findings have impact, both within and beyond the academic community?

We're interested in all the diverse ways in which your study might benefit/improve the health and well-being of older people or contribute to our understanding of the mechanisms contributing to increased longevity and healthy ageing and identifying areas for development of therapeutics. This might be by:

- Improving the health of older people
- Enhancing the quality of life, environment and well-being for older people
- Influencing change in public services/policy relating to the health and social care of older people
- Improving the financial or organisational performance of those who provide services for older people.

We have described impact here quite broadly but if you feel your project won't address any of these areas, then you can use this section to explain your reasoning. You may be carrying out this study to help you to provide proof-of-concept to enable you to apply for a larger award with greater potential for impact, for example.

If you are invited to submit a full application, we will be asking for a more detailed outline of your pathways to impact, which should be included in your full project plan.

Your outline application should however include some examples of actions you plan to take to help to achieve the impact. The Research Excellence Framework website has some useful resources, here is an [example](#).

Section 4 - Research environment and governance

Research environment

Please check here to confirm you are confident that you will have access to the facilities, equipment, samples, specialist advice and other resources you will need to carry out this project. If you are invited to submit a full application, you will be asked to provide full details.

Unchecked

Suitability of skills and experience

Please check here to confirm you are confident that members of the proposed research team have suitable experience and skills to conduct this project/study. If you are invited to submit a full application, you will be asked to provide full details.

Unchecked

DMT is a National Institute for Health Research (NIHR) non-commercial Partner. This means the studies that we fund may be eligible to access NIHR Clinical Research Network (CRN) support. The NIHR CRN supports researchers and the life sciences industry in planning, setting up and delivering high quality research to the agreed timelines and study recruitment target, for the benefit of the NHS and its patients in England. In partnership with your local R&D office, we encourage you to involve your local CRN team in discussions as early as possible when planning your study to fully benefit from the support the NIHR CRN offers as outlined in their Study Support Service. To find out more about how you can apply for this additional support to help deliver your study, please visit www.supportmystudy.nihr.ac.uk

If the support of the NIHR CRN is appropriate for your project please complete the following question:

Have you contacted the NIHR Clinical Research Network to see how they can help to support the delivery of your study?

- Yes
 No

If your project is clinical research, will you be applying for Excess Treatment Costs (ETCs)?

From 1 October 2018 the way in which Excess Treatment Costs (ETCs) are assessed and paid is changing. We are asking this question, to identify any researchers who might be affected by the new requirements so that if they are invited to submit a full application we can provide additional support and guidance. Further information can be found in our FAQ on eligible costs by clicking [here](#).

- Yes
 No

Does this study involve the use of animals?

- Yes
 No

Are you intending to use a clinical trials unit (CTU)?

- Yes
 No

Application and exploitation

Please check here if your project is likely to generate commercially exploitable intellectual property (you will have the opportunity to provide fuller details if you are invited to make a full application). You may view the [Trust's sample intellectual property agreement here](#).
